1.0 EXECUTIVE SUMMARY

Environmental Works, Inc. (EWI) performed a Limited Phase II Environmental Site Assessment (ESA) for the Price Chopper Property located at 2107 South 4th Street, Leavenworth, Leavenworth County, Kansas (subject property or Site).

This Limited Phase II ESA was completed to evaluate the Site for subsurface impacts as a result of the American Society of Testing and Materials (ASTM)-defined recognized environmental conditions (RECs) and vapor encroachment conditions (VECs) identified during the September 2019 Phase I ESA. The following were determined to be RECs and VECs to the subject property: 1) operation of an automotive salvage yard within close proximity of the Site; 2) operation of a landfill prior to environmental regulation within close proximity of the Site; 3) the proximity and history of non-compliance of the north adjoining former Leavenworth City Garage; and 4) the proximity and history of non-compliance and dumping of solvents on the north adjoining Great Western Manufacturing Company. The Limited Phase II ESA investigation involved the installation of seven (7) soil borings and five (5) temporary groundwater monitoring wells and the collection of eight (8) soil and five (5) groundwater samples for laboratory analysis. Additionally, three (3) temporary soil gas wells were installed and three (3) soil gas samples were collected for laboratory analysis. The potential contaminants of concern (COC) evaluated during this assessment included volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), polychlorinated biphenyls (PCBs), total petroleum hydrocarbons (TPH)-low-range hydrocarbons (LRH), TPH-high-range hydrocarbons (HRH) and mid-range hydrocarbons (MRH), and Resource Conservation and Recovery Act (RCRA) 8 metals.

The analytical results of this Limited Phase II ESA were compared to the Kansas Department of Health and Environment (KDHE) Tier 2 Risk-Based Standards for Kansas (RSK) values for both the Residential and Non-Residential scenarios. Metals results were also compared to the US Geological Survey (USGS) National Geochemical Survey average values for Leavenworth County, Kansas. In the absence of established KDHE Tier 2 RSKs for polychlorinated biphenyls (PCB) in soil, and volatile organic compounds in soil gas, EWI utilized the US Environmental Protection Agency (EPA) Regional Screening Levels for comparison to soil and Vapor Intrusion Screening Level (VISL) Target Sub-Slab and Near-Source Soil Gas Concentrations for Residential and Non-Residential (Commercial or Industrial) for comparison to soil gas analytical results.

Soil

Soil sample SB-5 (4-5) collected at the Site contained PCB-1254 (Aroclor 1254) at a concentration above the US EPA RSL for Residential Soil, but below the RSL for Industrial Soil. The soil sample also contained

lead at a concentration above the KDHE Tier 2 Residential RSK, but below the Non-Residential RSK. Soil samples collected at the Site also contained concentrations of TPHs and RCRA metals above the laboratory reporting limits, but below their respective KDHE Tier 2 RSKs.

Groundwater

Groundwater sample MW-5 contained a concentration of TPH-HRH above the KDHE Tier 2 Residential and Non-Residential RSKs. Groundwater sample MW-7 contained SVOC 2,6-dinitrotoluene at a concentration above the KDHE Tier 2 Residential and Non-Residential RSKs. Dissolved RCRA metal arsenic was detected in samples MW-1 and MW-5 at concentrations above the KDHE Tier 2 Residential and Non-Residential RSKs. Groundwater samples MW-1, MW-5 and MW-7 contained concentrations of TPH-MRH at concentrations above the KDHE Tier 2 Residential RSK, but below the Non-Residential RSK. Groundwater samples collected at the Site contained additional concentrations of VOC, SVOC, TPH, and RCRA metals; however, the concentrations were below their respective KDHE Tier 2 Residential and Non-Residential RSKs. PCBs were not detected above the laboratory reporting limit in groundwater samples collected at the Site.

Soil Gas

Soil gas samples collected at the Site contained VOC chloroform at concentrations above the EPA VISL Target Concentration for Residential Exterior Soil Gas, but below the Commercial comparison value. Several additional VOCs were detected in the soil gas samples at concentrations above the laboratory reporting limits, but below their respective EPA VISL comparison values.

Based on the concentrations of COCs observed in the soil gas samples collected at the Site, vapor intrusion does not appear to pose a risk to the current land use of the subject property.

2.0 INTRODUCTION

EWI was retained by Associated Wholesale Grocers (Client) to conduct a Limited Phase II ESA of the Price Chopper Property located at 2107 South 4th Street, Leavenworth, Leavenworth County, Kansas (see Figure 1.0). The Limited Phase II ESA was conducted in accordance with generally-accepted industry standards and American Society for Testing and Materials International (ASTM) E 1903-11 standard.

2.1 Objectives

The primary objective of this Limited Phase II ESA was to confirm or deny the presence of subsurface impacts at the Site as a result of the REC and VEC identified in September 2019 Phase I ESA. The following were determined to be RECs and VECs to the subject property: 1) operation of an automotive salvage yard within close proximity of the Site; 2) operation of a landfill prior to environmental regulation within close proximity of the Site; 3) the proximity and history of non-compliance of the north adjoining former Leavenworth City Garage; and 4) the proximity and history of non-compliance and dumping of solvents on the north adjoining Great Western Manufacturing Company. The Limited Phase II ESA involved the installation of temporary soil gas wells, soil borings, and temporary groundwater monitoring wells for collection of soil gas, soil, and groundwater samples for laboratory analysis. The potential COC for evaluation during this assessment were determined to be VOCs, SVOCs, PCBs, TPHs, and RCRA metals.

3.0 PROJECT BACKGROUND

3.1 Site Description and History

The subject property is 4.0 acres of commercial land located in an area of commercial and residential development. The Site is developed with an approximately 50,000 square foot (ft²) commercial structure developed in approximately 1991 and currently occupied by a grocery store, Price Chopper, which includes a barber shop, pharmacy, bakery, florist, and deli. A vacant tenant space is present on the southwest corner. The remaining areas of the Site are improved with asphalt-paved parking lots and associated landscaping.

According to historical documentation, the subject property was developed with various structures, likely residential, with railroad tracks intersecting the Site from north to south as early as 1910. The first available aerial photograph in 1947 indicates the Site was developed with various residential structures, railroad tracks, and Fivemile Creek was visible in the northeast corner. In 1966, the Site remains similar to previous years, except a portion of the east adjoining salvage yard is present on the east portion of the Site. Exterior material storage associated with the north adjoining property is also present on the north portion of the Site.

The northeast corner of the Site was cleared for development and improved with storage trailers by 1970. In addition, it appears that Fivemile Creek was redirected to the east during this time. By 1975, the northeast corner was developed with a paved lot and vehicle storage associated with adjoining properties. The remaining area of the Site consisted of residential and commercial structures along the west portion (including a furniture store in 1989) and railroad tracks/access roads through the central portion of the Site.

Railroad tracks and former structures were demolished by 1991 when the current Price Chopper structure with tenant spaces was developed on the east portion of the Site with paved parking to the west.

The adjoining properties have historically consisted of a landfill to the north/northeast prior to 1970, auto salvage adjoining to the east and various automotive repair facilities to the northeast (City of Leavenworth Garage/Leavenworth Service Center) and south across Marion Street.

3.2 Previous Assessments Summary

The Phase I ESA dated September 2019 was completed for the subject property and identified the following RECs and VECs associated with the Site:

1. An automotive salvage yard, identified in the city directories as Lakes Auto Salvage, has adjoined the Site to the east since as early as 1963. Vehicle storage is also visible onsite in the 1966 and 1985 aerial photographs. Based on the close proximity in addition to potential operation onsite, the automotive salvage yard is considered a REC and VEC to the Site.
2. A former landfill (City of Leavenworth Old City Landfill, City of Leavenworth 2nd & Limit Dump) was previously located north/northeast of the Site and was closed by approximately 1970. No information was available regarding sampling or investigation of the former landfill. Based on close proximity and the landfill's operation prior to environmental regulation, the facility is considered a REC and VEC to the Site.
3. Leavenworth City Garage was previously located northeast of the Site at South 3rd and Marion Street. Various USTs have been removed from the facility with no information regarding location or sampling to confirm or deny impact to the subsurface. In addition, a history of non-compliance has been identified at the facility including visible oil contamination and disposing of paint waste and paint contaminated thinner on the ground and into a storm drain which discharges to the east adjoining Fivemile Creek. Although visibly contaminated soil was reportedly removed and disposed, no confirmation sampling appears to have been conducted following the removal of the contaminated soil. In addition, groundwater was not evaluated during the assessment. The area is currently occupied by Leavenworth Animal Control. A Field Report dated July 8, 2013 provided by the City of Leavenworth indicates that "tanks" were removed from the facility on July 2, 2013. Two of the tanks were reportedly "relocated to the northeast of the site", still on the City of Leavenworth's property. During this relocation, tank contents were reportedly spilled on the ground surface. Tank spillage had previously been observed on standing water "north of the Price Chopper parking lot". The tanks removed during the construction of the Leavenworth Animal Control are potentially attributed to the former City Garage. Based on close proximity and a history of non-compliance, the City Garage poses a REC and VEC to the Site.
4. Great Western Manufacturing Co. adjoins the Site to the north at 2017 South 4th Street. A historical inspection dated 1987 indicates that waste paint and spent paint booth filters were historically being disposed of in the dumpster at the facility. The facility also previously dumped waste solvent on the ground or in the trash. The timeframe associated with the practice of improper solvent dumping is unknown. Based on the close proximity of the facility and history of solvent dumping, the facility has potential to impact the subject property and is considered a REC and VEC.

EWI requested documentation for the Site and surrounding properties from the City of Leavenworth to summarize and incorporate into the Phase I ESA. The City provided a copy of a Phase II Environmental Site Assessment dated December 1989 conducted for the Site prior to construction of the current Price Chopper. The Phase II ESA was performed in response to a previous Phase I ESA dated October 27, 1989, which identified potential off-site contaminant sources to the "north, east and southeast".

Adjacent properties to the north were identified as Great Western Manufacturing, GNB Batteries and the Leavenworth Service Center (also identified as the City Garage)/former landfill and properties to the east and southeast were identified as auto salvage yards with automotive repair shops to the south. EWI was not provided a copy of the previous Phase I ESA for review.

At the time of the Phase II investigation, two residences, a furniture store and small sheds were located on the subject property. The remaining area consisted of undeveloped land with an unimproved road (Third Street) and railroad line intersecting the Site. Boring and monitoring well locations from the previous Phase II investigation are included on Figure 2.0 – Sample Location Map of this Report.

Three (3) discrete shallow soil samples (B-1, B-2 and B-3) were collected from 2 feet below ground surface (bgs) along the east property line and two (2) discrete soil samples (MW-3 and MW-4) were collected from 3 feet bgs near the northeast corner of the Site. The samples were collected to investigate "possible lead and/or petroleum contamination" from the former underground storage tanks (USTs) associated with the adjoining Leavenworth Service Center property that was documented to have previously leaked "an undetermined amount of gasoline" and the adjoining auto salvage yard. Concentrations of lead were detected at approximately 20 parts per million (ppm) in each of the samples which was reportedly within typical background levels for the area. The samples collected at MW-3 and MW-4 identified total petroleum hydrocarbons (TPH) at concentrations of 140 ppm and 260 ppm respectively.

Six (6) monitoring wells were also installed at the subject property during the Phase II ESA. Three wells were installed along the northern property boundary (MW-1, MW-2 and MW-3), two wells along the eastern property boundary (MW-4 and MW-5) and one well (MW-6) in the southwest corner. No detectable concentrations of benzene, toluene, xylene or total lead were identified in groundwater at MW-1, MW-2, MW-3 or MW-5. No volatile or semi-volatile compounds were detected above 5 parts per billion (ppb) at MW-3, MW-5 or MW-6. Analytical results at MW-4 (along the northeast portion of the Site) identified elevated concentrations of metals in groundwater that were above National Drinking Water Standards for the time. In addition, a concentration of 18 ppb was detected for an unidentified semi-volatile compound in groundwater at MW-4. According to the Phase II narrative, the groundwater impacts at MW-4 are potentially attributed to the former landfill and/or auto salvage facility to the east.

Based on a review of results from the Phase II ESA, petroleum impacts were detected in shallow soil and concentrations of metals and semi-volatile compounds were detected in groundwater along the northeast portion of the Site. These impacts were potentially attributed to nearby industrial uses

including the former landfill, auto salvage and Leavenworth Service Center (also identified as the City Garage).

A Subsurface Exploration Report was also conducted for the proposed Price Chopper at Fourth & Marion Streets in October 1989. Miscellaneous rubble fill including gravel, brick, concrete, wood, metal and cinders were identified in borings advanced in the area of the proposed Price Chopper (north/northeast portion of the Site).

3.3 Geology

Based on field observations and a review of topographic map in the area of the Site, the surface topography of the subject property slopes to the east. The topography in the surrounding area generally slopes towards Fivemile Creek located approximately 175 feet east of the Site. Based on an interpretation of surface topography, groundwater flow direction in the area of the Site is anticipated to be to the east/southeast.

According to the United States Department of Agriculture (USDA) Web Soil Survey, the soils at the Site are classified as the Kennebec silt loam, Lagoda silt loam with 3 to 8 percent (%) slopes and Judson silt loam with 0 to 1% slopes. Kennebec series consists of deep, moderately well drained soils, frequently flooded on bottom land formed in silty alluvium. Lagoda silt loam consists of deep, sloping, moderately well drained soils on uplands formed in loess. Judson silt loam consists of deep, nearly level, well-drained soils on low terraces and foot slopes along creeks, formed in alluvium.

Based on field observations, soil at the Site appeared to be comprised primarily of silty clay. The soil borings were pushed to depths ranging from 25 and 30 feet bgs; however, shallow refusal (7.5 and 12.5 feet bgs) was encountered in borings SB-4 (due to wood debris) and SB-6 (due to concrete) located on the north and east sides of the Site structure. Saturated conditions were observed at depths ranging from 19.5 to 25 feet. Boring logs are included in Appendix A.

4.0 INVESTIGATION ACTIVITIES

A Limited Phase II ESA proposal was submitted to Associated Wholesale Grocers, dated September 26, 2019. With the exception of deviations discussed in the following sections, the investigation was conducted in accordance with the scope of work provided in EWI's proposal. The investigation included the installation of soil gas wells, soil borings for field screening and the installation of temporary groundwater monitoring wells and the collection of soil gas, soil, and groundwater samples for laboratory analysis.

Boring logs are provided as Appendix A, and Site photographs are provided in Appendix B. The soil boring/temporary groundwater well and temporary soil gas well locations are provided on Figure 2.0.

4.1 Hydraulic Probing and Sampling Summary

The field investigation consisted of direct-push soil probing using a Geoprobe® 7822DT track-mounted probe unit on October 10 and 11, 2019. Seven (7) direct-push soil borings (SB-1 through SB-7) were advanced and temporary groundwater wells were co-located with five (5) of the soil boring locations. Additionally, three (3) temporary soil gas wells were installed at the Site. The temporary groundwater wells were sampled on the same day of installation. The temporary soil gas wells were installed and sampled on October 10, and sampled October 11, 2019.

The following table provides a soil gas, soil and groundwater sampling and analysis summary for the field investigation activities. The table includes a description of the environmental concern and potential contaminants of concern (COC) evaluated and the general location and total depths of the soil borings/temporary groundwater wells installed at the Site. The table also lists the soil and groundwater samples collected and the associated COC submitted for laboratory analysis.

Environmental Concern	Soil Borings (total depth of boring) ¹ Temporary Groundwater Wells (MW)	Soil and Groundwater Samples ²	COC Analysis	General Soil Boring/Groundwater Well Location
REC 4: North adjoining facility with history of non-compliance	SB-1 (30 feet bgs) SB-2 (30 feet bgs) MW-1 and MW-2	SB-1 (26-27) SB-2 (22-23) MW-1 MW-2	VOCs TPH-LRH TPH-MRH/HRH RCRA Metals	The soil borings were located along the north property boundary, on the west portion of the Site. Temporary groundwater wells were co-located with both soil borings SB-1 and SB-2.
REC 2: Former landfill in close proximity REC 3: North adjoining former City Garage with USTs and history of non-compliance	SB-3 (25 feet bgs) SB-4 (12.5 feet bgs) MW-3 SVW-1 (3 feet bgs) SVW-2 (3 feet bgs) SVW-3 (3 feet bgs)	SB-3 (18-19) SB-4 (11.5-12.5) MW-3 SVW-1 SVW-2 SVW-3	VOCs SVOCS TPH-LRH TPH-MRH/HRH PCBs RCRA Metals TO-15 (VOCs)	Soil borings were located along the north property boundary, north of the Site structure. A groundwater well was co-located with soil boring SB-3 near the northeast corner of the Site structure. Temporary soil gas wells were installed northwest, north and northeast of the Site structure.
REC 1: East adjoining/former on Site auto salvage REC 2: Former landfill in close proximity	SB-5 (30 feet bgs) SB-6 (7.5 feet bgs) SB-7 (30 feet bgs) MW-5 and MW-7	SB-5 (4-5) SB-5 (8-10) SB-6 (4-6) SB-7 (24-25) MW-5 MW-7	VOCs SVOCS TPH-LRH TPH-MRH/HRH PCBs RCRA Metals	Soil borings were located along the east side of the structure along the east property boundary of the Site. Temporary groundwater wells were co-located with soil borings SB-5 and SB-7 near the northeast and southeast corners of the Site structure.

¹ The total depth in feet represents the total depth of borings at target depth or shallow refusal.

² Sample Identification:

- SB-1 (2-4) Soil Boring (sample depth in feet bgs)
- MW-1 Temporary groundwater well-corresponding soil boring
- SVW-1 Soil gas sample-corresponding well location

COC analysis and analytical methods:

- PCB Polychlorinated biphenyls by EPA Method 8082
- RCRA Metals U.S. EPA Resource Conservation and Recovery Act list of 8 metals by EPA Method 6010/7471.
Groundwater samples were filtered by the laboratory and reported as dissolved metals (EPA Method 7470)
- SVOCS Semi volatile organic compounds by EPA Method 8270
- LRH Low-range hydrocarbons (KS Methods/8260)
- MRH/HRH Mid-range hydrocarbons HRH/high-range hydrocarbons (KS Methods)
- TPH Total petroleum hydrocarbons
- VOCs Volatile organic compounds by EPA Method 8260

4.2 Soil Observations and Sampling

Soil samples were collected continuously from the soil borings using a five-foot, acetate-lined Dual Tube sampler. Individual soil samples were logged to define the soil strata and relative moisture content, and inspected to note visual signs of petroleum impact and/or olfactory indications of volatile organic vapors.

Soil cores were field screened using a PID with a 10.6 electron volt (eV) lamp for VOCs. PID soil screening results are provided on the boring logs included in Appendix A.

Suspect fill material indicative of landfill waste was observed in boring SB-5 located on the northeast corner of the Site structure at depths of approximately 5 to 7 feet bgs and from 9 to 10 feet bgs. The suspect fill consisted of brick, gravel, wood, general refuse debris (plastic bags, pieces of plastic), and metallic debris intermixed with black silty clay.

Fill material was observed just below the surface in the majority of the soil borings advanced at the Site. The fill consisted of concrete, asphalt, gravel and sand. Boring SB-6 also contained fill material consisting of brick, gravel, sand and pieces of glass intermixed with grey and dark grey silty clay. The fill material was encountered at depths of 4 to 7.5 feet bgs, and was not indicative of landfill waste as described above.

Slightly elevated PID screening results were observed borings SB-3 and SB-5. The PID readings ranged from 0.1 to 1.4 ppm. Other than the suspect fill materials described above, no visual indications of impacts were observed in the borings installed at the Site. Additionally, no petroleum-like or other suspect odors were observed in the soil borings installed at the Site.

Soil samples were collected and submitted for laboratory analysis as listed on the summary table above. Soil samples were collected from the interval with the highest likelihood for impact as observed through field screening results (PID screening or visual observations) or sampler judgment. The samples were immediately placed in laboratory-provided sample containers, labeled, and packed on ice. The samples were submitted to Pace Analytical for analysis of potential COC as indicated on the summary table above.

4.3 Groundwater Sampling

Five (5) soil borings as indicated on the summary table above were completed with temporary well casings for the collection of a groundwater sample. Temporary casings were comprised of one-inch, Schedule 40 PVC with 0.01-inch slotted screen. Temporary groundwater wells were installed to the total depth of the borings. The temporary groundwater wells were installed on October 10, 2019 and evaluated for water and sampled the same day of installation.

The temporary groundwater wells were gauged using a water level indicator prior to sample collection. Groundwater was measured at depths ranging between 8.36 to 21.46 feet bgs. Sufficient groundwater

was produced for sample collection from all the temporary groundwater wells (MW-1, MW-2, MW-3, MW-5 and MW-7) installed at the Site.

The samples were collected using clean dedicated tubing fitted with a check valve. Approximately one-liter was purged from each temporary well prior to sample collection. Groundwater was transferred to laboratory-provided sample containers labeled, and packed on ice. The samples were submitted to Pace Analytical for analysis of potential COC as indicated on the summary table above.

4.4 Soil Vapor Sampling

Three (3) temporary soil gas wells were installed and three (3) soil gas samples were collected and submitted for laboratory analysis. Each temporary soil gas well involved the installation of a 0.5-inch implant anchor point connected to ¼-inch nylon tubing. The soil gas wells were then constructed with a temporary sand filter pack, dry bentonite, and hydrated bentonite seal to prevent infiltration of vapors from the atmosphere. The soil gas samples were collected from approximately three (3) feet bgs. Soil gas samples 2107-SVW-1, 2107-SVW-2, and 2107-SVW-3 were collected northeast, north and northwest of the Site structure (see Figure 2.0).

The soil vapor samples were collected in Summa canisters using clean dedicated polyethylene tubing. The sampling train was purged and tested for leaks prior to sample collection. A total of approximately three well volumes of air were purged from the vapor well tubing prior to the collection of soil vapor samples. To ensure that the proper seal was produced within the sampling train, a qualitative vacuum check was performed wherein the syringe was pulled with two-way valve in the off position. The tubing air was evacuated and there was no evidence that the vacuum was decreasing. Soil vapor sampling field forms are provided in Appendix C.

The soil vapor samples were shipped under chain of custody to Centek Laboratories, LLC in Syracuse, New York (Centek). Centek is an American Industrial Hygiene Association (AIHA) air analytical laboratory. The vapor samples were analyzed for VOCs and naphthalene by US EPA Method TO-15.

4.5 Equipment Decontamination, Abandonment, and Investigation-Derived Waste (IDW) Management

Sampling equipment was decontaminated between sampling locations to prevent cross-contamination. Equipment was cleaned with Alconox® solution using a nylon brush. Following cleaning, the equipment was rinsed with tap water and rinsed a final time with distilled water.

Liquid IDW generated during drilling activities, including purge water, and equipment decontamination fluids, was spread on-site within a vegetated area. Excess soil cuttings were thin spread in vegetated areas or placed back into their respective boreholes and remaining void space was filled with granular bentonite. Other IDW (i.e. disposable PPE and disposable sampling equipment) were disposed of as municipal solid waste.

At the conclusion of field activities, the temporary groundwater wells were removed and the void space properly abandoned by backfilling with bentonite. Abandonment registration records were submitted in accordance with applicable regulations.

5.0 INVESTIGATION RESULTS

The collection of soil gas, soil and groundwater samples for laboratory analysis was completed during the investigation. Laboratory analytical reports are included in Appendix C.

Soil and groundwater data were compared to the Kansas Department of Health and Environment (KDHE) Tier 2 Risk-Based Standards for Kansas (RSK) values outlined in Appendix A of the RSK Manual (October 2010 and September 2015 amendments). The data were compared to the Tier 2 RSK values for both the Residential and Non-Residential scenarios. The USGS National Geochemical Survey average values for Leavenworth County, Kansas were also used for comparison of the RCRA Metals soils data. In the absence of established KDHE Tier 2 RSKs for PCB in soil, and VOCs in soil gas, EWI utilized the US EPA RSLs and VISLs Target Near-Source Soil Gas Concentrations for Residential and Non-Residential (Commercial or Industrial) land use scenarios for comparison to analytical results.

The KDHE Tier 2 RSKs for both Residential and Non-Residential land use scenarios are compared to a summary of the soil analytical results presented on Tables 1.0, 2.0 and 3.0 and groundwater analytical results are presented on Tables 4.0 and 5.0. Soil gas analytical results are compared to US EPA VISL Target Soil Gas Concentrations in Table 6.0.

5.1 Soil Analytical Results

TPH-MRH

EWI submitted seven (7) soil samples for analysis of TPH-MRH. Concentrations of TPH-MRH were detected above the laboratory reporting limit as follows:

- TPH-MRH was detected in three (3) soil samples (SB-4 (11.5-12.5), SB-5 (8-10) and SB-6 (4-6)) at concentrations ranging from 12.7 to 29.5 milligrams per kilogram (mg/kg), below the KDHE Tier 2 Residential and Non-Residential RSKs of 250 and 350 mg/kg, respectively.

TPH-HRH

EWI submitted seven (7) soil samples for analysis of TPH-HRH. Concentrations of TPH-HRH were detected above the laboratory reporting limit as follows:

- TPH-HRH was detected in all the soil samples submitted for analysis at concentrations ranging from 21.8 to 327 mg/kg, below the KDHE Tier 2 Residential and Non-Residential RSKs of 6,000 and 27,500 mg/kg, respectively.

TPH-LRH

EWI submitted seven (7) soil samples for laboratory analysis of TPH-LRH; however, none of the samples contained concentrations of TPHs above the laboratory reporting limits.

PCBs

EWI submitted six (6) soil samples for analysis of PCB. Concentrations of PCBs were detected above the laboratory reporting limits as follows:

- PCB-1254 (Aroclor 1254) was detected in soil samples SB-5 (4-5) and SB-5 (8-10) at concentrations of 0.71 and 0.10 mg/kg, respectively. The highest concentration observed in sample SB-5 (4-5) was above the US EPA RSL for Residential Soil, but below the RSL for Industrial Soil. The remaining concentration was below the US EPA RSLs.

Metals

EWI submitted all eight (8) soil samples for analysis of RCRA 8 metals (arsenic, barium, cadmium, chromium, lead, selenium, silver, and mercury). Concentrations of metals were detected above the laboratory reporting limits as follows:

- Lead was detected in all the soil samples at concentrations ranging from 11.1 to 432 mg/kg. The highest concentration of 432 mg/kg was observed in sample SB-5 (4-5), above the KDHE Tier 2 Residential RSK of 400 mg/kg, but below the Non-Residential RSK of 1,000 mg/kg. The remaining concentrations observed in soil samples were below the KDHE Tier 2 Residential and Non-Residential RSKs.
- Arsenic, barium, cadmium, chromium and mercury were detected in the remaining soil samples; however, all the concentrations were below their respective KDHE Tier 2 Residential and Non-Residential RSKs.

5.2 Groundwater Analytical Results

TPH-MRH

EWI submitted all five (5) groundwater samples for analysis of TPH-MRH. Concentrations of TPH-MRH were detected above the laboratory reporting limits as follows:

- TPH-MRH was detected in all the samples at concentrations ranging from 0.13 to 0.33 milligrams per liter (mg/L). The concentrations observed in samples MW-1, MW-5 and MW-7 were above the KDHE Tier 2 Residential RSK of 0.15 mg/L, but below Non-Residential RSK of 0.40 mg/L for the Groundwater Pathway. The remaining concentrations were below their respective KDHE Tier 2 RSKs.

TPH-HRH

EWI submitted all five (5) groundwater samples for analysis of TPH-HRH. Concentrations of TPH-HRH were detected above the laboratory reporting limits as follows:

- TPH-HRH was detected in all the samples at concentrations ranging from 0.77 to 3.1 mg/L. The highest concentration of 3.1 mg/L was observed in sample MW-5, above the KDHE Tier 2 Residential and Non-Residential RSKs of 1.0 and 2.5 mg/L, respectively. The remaining concentrations were all below their respective KDHE Tier 2 RSKs.

TPH-LRH

EWI submitted all five groundwater samples for analysis of TPH-LRH; however, none of the samples contained concentrations of TPH-LRH above the laboratory reporting limits.

VOCs

EWI submitted all five (5) groundwater samples for analysis of VOCs. Concentrations of VOCs were detected above the laboratory reporting limits as follows:

- p-Isopropyltoluene was detected in sample MW-5 at a concentration of 0.0016 mg/L; currently KDHE has no established Tier 2 RSKs for p-isopropyltoluene.
- None of the remaining samples contained concentrations of VOCs above the laboratory reporting limit.

RCRA Metals

EWI submitted all five (5) groundwater samples for analysis of dissolved RCRA 8 metals (arsenic, barium, cadmium, chromium, lead, selenium, silver, and mercury). Concentrations of metals were detected above the laboratory reporting limits as follows:

- Dissolved arsenic was detected in samples MW-1 and MW-2 at concentrations of 0.015 mg/L, respectively, above the KDHE Tier 2 Residential and Non-Residential RSK of 0.01 mg/L.
- Dissolved barium was detected in all the groundwater samples at concentrations ranging from 0.035 to 0.40 mg/L, below the KDHE Tier 2 Residential and Non-Residential RSK of 2.0 mg/L.

SVOCs

EWI submitted three (3) groundwater samples for laboratory analysis of SVOCs. Concentrations of SVOCs were detected above the laboratory reporting limits as follows:

- 2,6-Dinitrotoluene was detected in sample MW-7 at a concentration of 0.0182 mg/L, above the KDHE Tier 2 Residential and Non-Residential RSKs of 0.000557 and 0.00187 mg/L, respectively.
- None of the remaining samples contained concentrations of SVOCs above the laboratory reporting limit.

PCBs

EWI submitted three (3) groundwater samples for laboratory analysis of PCBs; however, none were detected above the laboratory reporting limit in the groundwater samples submitted for analysis.

5.3 Soil Vapor Analytical Results

Soil vapor data were compared to the US EPA VISL Target Target Sub-Slab and Near-Source Soil Gas Concentrations for both Residential and Commercial scenarios. Soil gas analytical results are summarized on Table 6.0.

EWI collected three (3) soil gas samples (2107-SVW-1, 2107-SVW-2 and 2107-SVW-3) for laboratory analysis of VOCs. The following VOCs were detected above the laboratory reporting limits in the soil gas samples:

- Chloroform was detected in samples 2107-SVW-1 and 2107-SVW-3 at concentrations of 49 and 120 micrograms per cubic meter ($\mu\text{g}/\text{m}^3$), respectively. The concentrations are above the EPA VISL Residential Target Concentration for Exterior Soil Gas of $41 \mu\text{g}/\text{m}^3$, but below the Non-Residential value of $180 \mu\text{g}/\text{m}^3$. The remaining concentration of chloroform was below the EPA VISL comparison values.
- Several additional VOCs compounds were detected in the soil gas samples including the following: 1,1,1-trichloroethane, 1,2,4-trimethylbenzene, 1,3,5-trimethylbenzene, 2,2,4-trimethylpentane, 4-ethyltoluene, acetone, benzene, bromodichloromethane, carbon disulfide, chloromethane, cyclohexane, ethyl acetate, ethylbenzene, freon 11 (trichlorofluoromethane), freon 114, freon 12 (dichlorodifluoromethane), heptane, hexane, isopropyl alcohol, methyl ethyl ketone (MEK), methylene chloride, naphthalene, m&p-xylene, o-xylene, styrene, tetrachloroethylene (PCE), trichlorethylene (TCE) and toluene were detected in one or more of the soil vapor samples; however, the concentrations were all below their respective EPA VISL values.

5.4 Vapor Encroachment Condition

EWI compared the soil gas concentrations observed in samples collected onsite to the US EPA VISL Calculator (US EPA, 2019-May) used to generate Target Sub-Slab and Near-source Soil Gas Concentrations. The VISLs were generated based on Residential and Commercial land use and a Target Risk for Carcinogens value of 10E-05 and a Target Hazard Quotient of 1.0. The VISL calculator utilizes conservative, generic attenuation factors and default exposure parameters to derive screening levels for soil gas based on target indoor air concentrations under reasonable worst-case conditions for long-term/chronic exposure. VISLs are intended as screening levels to guide decisions regarding the necessity for further investigation or whether no further action may be required. The concentrations of chloroform

observed in samples 2107-SVW-1 and 2107-SVW-3 were above the EPA VISL for Residential land use scenario, but below the EPA VISL for Commercial land use. The remaining concentrations of COC were all below the EPA VISLs for both the Residential and Commercial land use scenarios. Based on the concentrations of COCs observed in the soil gas samples collected at the Site, vapor intrusion does not appear to pose a significant risk to the current land use of the subject property.

6.0 FINDINGS AND CONCLUSIONS

The field investigation activities were completed on October 10 and 11, 2019 and included the advancement of seven (7) soil borings and installation of five (5) temporary groundwater wells and the collection of eight (8) soil and five (5) groundwater samples for laboratory analysis. Additionally, three (3) temporary soil gas wells were installed and three (3) soil gas samples were collected for laboratory analysis. The potential COC evaluated during this assessment included VOCs, SVOCs, PCBs, TPH-LRH/MRH/HRH, and RCRA 8 metals.

Soil and groundwater data were compared to the KDHE Tier 2 RSKs values outlined in Appendix A of the RSK Manual (October 2010 and September 2015 amendments) for both the Residential and Non-Residential scenarios. Metals results were also compared to the USGS National Geochemical Survey average values for Leavenworth County, Kansas. In the absence of established KDHE Tier 2 RSKs for PCB in soil, and VOCs in soil gas, EWI utilized the US EPA RSLs and VISLs Target Near-Source Soil Gas Concentrations for Residential and Non-Residential (Commercial or Industrial) land use scenarios for comparison to analytical results.

Soil

Soil sample SB-5 (4-5) collected at the Site contained PCB-1254 (Aroclor 1254) at a concentration above the US EPA RSL for Residential Soil, but below the RSL for Industrial Soil. The soil sample also contained lead at a concentration above the KDHE Tier 2 Residential RSK, but below the Non-Residential RSK. Soil samples collected at the Site also contained concentrations of TPHs and RCRA metals above the laboratory reporting limits, but below their respective KDHE Tier 2 RSKs.

Groundwater

Groundwater sample MW-5 contained a concentration of TPH-HRH above the KDHE Tier 2 Residential and Non-Residential RSKs. Groundwater sample MW-7 contained SVOC 2,6-dinitrotoluene at a concentration above the KDHE Tier 2 Residential and Non-Residential RSKs. Dissolved RCRA metal arsenic was detected in samples MW-1 and MW-5 at concentrations above the KDHE Tier 2 Residential and Non-Residential RSKs. Groundwater samples MW-1, MW-5 and MW-7 contained concentrations of TPH-MRH at concentrations above the KDHE Tier 2 Residential RSK, but below the Non-Residential RSK. Groundwater samples collected at the Site contained additional concentrations of VOC, SVOC, TPH, and RCRA metals; however, the concentrations were below their respective KDHE Tier 2 Residential and Non-Residential RSKs. PCBs were not detected above the laboratory reporting limit in groundwater samples collected at the Site.

Soil Gas

Soil gas samples collected at the Site contained VOC chloroform at concentrations above the EPA VISL Target Concentration for Residential Exterior Soil Gas, but below the Commercial comparison value. Several additional VOCs were detected in the soil gas samples at concentrations above the laboratory reporting limits, but below their respective EPA VISL comparison values.

Based on the concentrations of COCs observed in the soil gas samples collected at the Site, vapor intrusion does not appear to pose a risk to the current land use of the subject property.

7.0 LIMITATIONS OF STUDY

No significant limitations were encountered during this Limited Phase II ESA. This report has been prepared expressly for Associated Wholesale Grocers. This report has been prepared in accordance with generally accepted environmental assessment practices and represents a good faith effort to include all relevant and factual data available in accordance with an agreement with Associated Wholesale Grocers. These conclusions presented in this report are based solely upon the reported analytical results from an independent laboratory for the samples collected from discrete locations predetermined by the Client on the subject property. The borings were relocated as close as possible to the proposed boring locations if access limitations were encountered. It is possible that impact may be present in areas of the subject property not sampled. The conclusions are intended exclusively for the purpose outlined herein and at the site location and project indicated. No other warranty, expressed or implied, is made as to the contents, summary and conclusions presented herein. This report is intended for the sole use of Associated Wholesale Grocers. The scope of services performed in execution of this investigation may not be appropriate to satisfy the need of other users, and any use or re-use of this document or the findings, conclusions, or recommendations presented herein is at the sole risk of said users.

Kansas City, MO 64108

RE: Project: AWG-LEAVENWORTH, KS PHASE II E
Pace Project No.: 60318015

Dear GREG DILLON:

Enclosed are the analytical results for sample(s) received by the laboratory on October 11, 2019. The results relate only to the samples included in this report. Results reported herein conform to the most current, applicable TNI/NELAC standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Angie Brown

REPORT OF LABORATORY ANALYSIS

This report shall not be reproduced, except in full,
without the written consent of Pace Analytical Services, LLC.

PROJECT NARRATIVE

Project: AWG-LEAVENWORTH, KS PHASE II E
Pace Project No.: 60318015

Method: KS MRH/HRH
Description: KS MRH/HRH
Client: ENVIRONMENTAL WORKS
Date: October 18, 2019

General Information:

12 samples were analyzed for KS MRH/HRH. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

Hold Time:

The samples were analyzed within the method required hold times with any exceptions noted below.

Sample Preparation:

The samples were prepared in accordance with EPA 3510C with any exceptions noted below.

The samples were prepared in accordance with EPA 3546 with any exceptions noted below.

Initial Calibrations (including MS Tune as applicable):

All criteria were within method requirements with any exceptions noted below.

Continuing Calibration:

All criteria were within method requirements with any exceptions noted below.

Surrogates:

All surrogates were within QC limits with any exceptions noted below.

Method Blank:

All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

Laboratory Control Spike:

All laboratory control spike compounds were within QC limits with any exceptions noted below.

Matrix Spikes:

All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

Additional Comments:

PROJECT NARRATIVE

Project: AWG-LEAVENWORTH, KS PHASE II E
Pace Project No.: 60318015

Method: EPA 8082
Description: 8082 GCS PCB SW
Client: ENVIRONMENTAL WORKS
Date: October 18, 2019

General Information:

6 samples were analyzed for EPA 8082. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

Hold Time:

The samples were analyzed within the method required hold times with any exceptions noted below.

Sample Preparation:

The samples were prepared in accordance with EPA 3546 with any exceptions noted below.

Initial Calibrations (including MS Tune as applicable):

All criteria were within method requirements with any exceptions noted below.

Continuing Calibration:

All criteria were within method requirements with any exceptions noted below.

QC Batch: 615740

CL: The continuing calibration for this compound is outside of Pace Analytical acceptance limits. The results may be biased low.

- SB-3 (18-19) (Lab ID: 60318015003)
 - Decachlorobiphenyl (S)
- SB-4 (11.5-12.5) (Lab ID: 60318015004)
 - Decachlorobiphenyl (S)
- SB-5 (8-10) (Lab ID: 60318015006)
 - Decachlorobiphenyl (S)
- SB-6 (4-6) (Lab ID: 60318015007)
 - Decachlorobiphenyl (S)
- SB-7 (24-25) (Lab ID: 60318015008)
 - Decachlorobiphenyl (S)

QC Batch: 615926

CL: The continuing calibration for this compound is outside of Pace Analytical acceptance limits. The results may be biased low.

- BLANK (Lab ID: 2514309)
 - Decachlorobiphenyl (S)
- LCS (Lab ID: 2514310)
 - Decachlorobiphenyl (S)
- SB-5 (4-5) (Lab ID: 60318015005)
 - Decachlorobiphenyl (S)

Surrogates:

All surrogates were within QC limits with any exceptions noted below.

Method Blank:

All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

Pace Project No.: 60318015

Method: EPA 5030B/8260

Description: 8260 MSV

Client: ENVIRONMENTAL WORKS

Date: October 18, 2019

General Information:

6 samples were analyzed for EPA 5030B/8260. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

pH: Post-analysis pH measurement indicates insufficient VOA sample preservation.

- MW-3 (Lab ID: 60318015011)

Hold Time:

The samples were analyzed within the method required hold times with any exceptions noted below.

Initial Calibrations (including MS Tune as applicable):

All criteria were within method requirements with any exceptions noted below.

Continuing Calibration:

All criteria were within method requirements with any exceptions noted below.

Internal Standards:

All internal standards were within QC limits with any exceptions noted below.

Surrogates:

All surrogates were within QC limits with any exceptions noted below.

Method Blank:

All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

Laboratory Control Spike:

All laboratory control spike compounds were within QC limits with any exceptions noted below.

QC Batch: 615872

L1: Analyte recovery in the laboratory control sample (LCS) was above QC limits. Results for this analyte in associated samples may be biased high.

- LCS (Lab ID: 2514119)
- p-Isopropyltoluene

Matrix Spikes:

All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

QC Batch: 615697

A matrix spike/matrix spike duplicate was not performed due to insufficient sample volume.

QC Batch: 615872

A matrix spike/matrix spike duplicate was not performed due to insufficient sample volume.

Additional Comments:

This data package has been reviewed for quality and completeness and is approved for release.

ANALYTICAL RESULTS

Project: AWG-LEAVENWORTH, KS PHASE II E
Pace Project No.: 60318015

Sample: SB-1 (26-27) Lab ID: **60318015001** Collected: 10/10/19 10:10 Received: 10/11/19 15:41 Matrix: Solid

Results reported on a "dry weight" basis and are adjusted for percent moisture, sample size and any dilutions.

ANALYTICAL RESULTS

Project: AWG-LEAVENWORTH, KS PHASE II E
Pace Project No.: 60318015

Sample: SB-3 (18-19) Lab ID: **60318015003** Collected: 10/10/19 10:50 Received: 10/11/19 15:41 Matrix: Solid

Results reported on a "dry weight" basis and are adjusted for percent moisture, sample size and any dilutions.

REPORT OF LABORATORY ANALYSIS

This report shall not be reproduced, except in full,
without the written consent of Pace Analytical Services, LLC.

ANALYTICAL RESULTS

Project: AWG-LEAVENWORTH, KS PHASE II E
Pace Project No.: 60318015

Sample: SB-4 (11.5-12.5) **Lab ID: 60318015004** Collected: 10/10/19 11:40 Received: 10/11/19 15:41 Matrix: Solid

Results reported on a "dry weight" basis and are adjusted for percent moisture, sample size and any dilutions.

REPORT OF LABORATORY ANALYSIS

This report shall not be reproduced, except in full,
without the written consent of Pace Analytical Services, LLC.

ANALYTICAL RESULTS

Project: AWG-LEAVENWORTH, KS PHASE II E
Pace Project No.: 60318015

Sample: SB-5 (4-5) Lab ID: **60318015005** Collected: 10/10/19 13:40 Received: 10/11/19 15:41 Matrix: Solid

Results reported on a "dry weight" basis and are adjusted for percent moisture, sample size and any dilutions.

REPORT OF LABORATORY ANALYSIS

This report shall not be reproduced, except in full,
without the written consent of Pace Analytical Services, LLC.

ANALYTICAL RESULTS

Project: AWG-LEAVENWORTH, KS PHASE II E
Pace Project No.: 60318015

Sample: SB-5 (8-10) Lab ID: 60318015006 Collected: 10/10/19 13:30 Received: 10/11/19 15:41 Matrix: Solid

Results reported on a "dry weight" basis and are adjusted for percent moisture, sample size and any dilutions.

ANALYTICAL RESULTS

Project: AWG-LEAVENWORTH, KS PHASE II E
Pace Project No.: 60318015

Sample: SB-6 (4-6) Lab ID: **60318015007** Collected: 10/10/19 13:50 Received: 10/11/19 15:41 Matrix: Solid

Results reported on a "dry weight" basis and are adjusted for percent moisture, sample size and any dilutions.

REPORT OF LABORATORY ANALYSIS

This report shall not be reproduced, except in full,
without the written consent of Pace Analytical Services, LLC.

ANALYTICAL RESULTS

Project: AWG-LEAVENWORTH, KS PHASE II E
Pace Project No.: 60318015

Sample: SB-7 (24-25) Lab ID: **60318015008** Collected: 10/10/19 14:40 Received: 10/11/19 15:41 Matrix: Solid

Results reported on a "dry weight" basis and are adjusted for percent moisture, sample size and any dilutions.

QUALIFIERS

Project: AWG-LEAVENWORTH, KS PHASE II E
 Pace Project No.: 60318015

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.
 ND - Not Detected at or above adjusted reporting limit.
 TNTC - Too Numerous To Count
 J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.
 MDL - Adjusted Method Detection Limit.
 PQL - Practical Quantitation Limit.
 RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.
 S - Surrogate
 1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.
 Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.
 LCS(D) - Laboratory Control Sample (Duplicate)
 MS(D) - Matrix Spike (Duplicate)
 DUP - Sample Duplicate
 RPD - Relative Percent Difference
 NC - Not Calculable.
 SG - Silica Gel - Clean-Up
 U - Indicates the compound was analyzed for, but not detected.
 N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.
 Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.
 TNI - The NELAC Institute.

LABORATORIES

PASI-K Pace Analytical Services - Kansas City

BATCH QUALIFIERS

Batch: 615697
 [M5] A matrix spike/matrix spike duplicate was not performed for this batch due to insufficient sample volume.
 Batch: 615872
 [M5] A matrix spike/matrix spike duplicate was not performed for this batch due to insufficient sample volume.

ANALYTE QUALIFIERS

CL	The continuing calibration for this compound is outside of Pace Analytical acceptance limits. The results may be biased low.
D3	Sample was diluted due to the presence of high levels of non-target analytes or other matrix interference.
L1	Analyte recovery in the laboratory control sample (LCS) was above QC limits. Results for this analyte in associated samples may be biased high.
M1	Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.
S0	Surrogate recovery outside laboratory control limits.
S3	Surrogate recovery exceeded laboratory control limits. Analyte presence below reporting limits in associated sample.
S4	Surrogate recovery not evaluated against control limits due to sample dilution.
pH	Post-analysis pH measurement indicates insufficient VOA sample preservation.

RE: 2107 S, 4th St.

Dear Greg Dillon:

Centek Laboratories, LLC received 3 sample(s) on 10/15/2019 for the analyses presented in the following report.

I certify that this data package is in compliance with the terms and conditions of the Contract, both technically and for completeness. Release of the data contained in this hardcopy data package and/or in the computer readable data submitted has been authorized by the Laboratory Manager or his designee, as verified by the following signature.

Centek Laboratories performs all analyses according to EPA, NIOSH or OSHA-approved analytical methods. Centek Laboratories is dedicated to providing quality analyses and exceptional customer service. All method blanks, laboratory spikes, and/or matrix spikes met quality assurance objective except as indicated in the case narrative. All samples were received and analyzed within the EPA recommended holding times. Test results are not Method Blank (MB) corrected for contamination.

We do our best to make our reporting format clear and understandable and hope you are thoroughly satisfied with our services. Please contact your client service representative at (315) 431-9730 or myself, if you would like any additional information regarding this report.

Thank you for using Centek Laboratories. This report can not be reproduced except in its entirety, without prior written authorization.

Sincerely,

William Dobbin
Lead Technical Director

Disclaimer: The test results and procedures utilized, and laboratory interpretations of the data obtained by Centek as contained in this report are believed by Centek to be accurate and reliable

for sample(s) tested. In accepting this report, the customer agrees that the full extent of any and all liability for actual and consequential damages of Centek for the services performed shall be equal to the fee charged to the customer for the services as liquidated damages. ELAP does not offer certification for the following parameters by this method at present time, they are: 4-ethyltoluene, ethyl acetate, propylene, Tetrahydrofuran, 4-PCH, sulfur derived and silicon series compounds.

Centek Laboratories, LLC Terms and Conditions

Sample Submission

All samples sent to Centek Laboratories should be accompanied by our Request for Analysis Form or Chain of Custody Form. A Chain of Custody will be provided with each order shipped for all sampling events, or if needed, one is available at our website www.CentekLabs.com. Samples received after 3:00pm are considered to be a part of the next day's business.

Sample Media

Samples can be collected in an canister or a Tedlar bag. Depending on your analytical needs, Centek Laboratories may receive a bulk, liquid, soil or other matrix sample for headspace analysis.

Blanks

Every sample is run with a surrogate or tracer compound at a pre-established concentration. The surrogate compound run with each sample is used as a standard to measure the performance of each run of the instrument. If required, a Minican can be provided containing nitrogen to be run as a trip blank with your samples.

Sampling Equipment

Centek Laboratories will be happy to provide the canisters to carry-out your sampling event at no charge. The necessary accessories, such as regulators, tubing or personal sampling belts, are also provided to meet your sampling needs. The customer is responsible for all shipping charges to the client's destination and return shipping to the laboratory. Client assumes all responsibility for lost, stolen and any damages of equipment.

Turn Around time (TAT)

Centek Laboratories will provide results to its clients in one business-week by 6:00pm EST after receipt of samples. For example, if samples are received on a Monday they are due on the following Monday by 6:00pm EST. Results are faxed or emailed to the requested location indicated on the Chain of Custody. Non-routine analysis may require more than the one business-week turnaround time. Please confirm non-routine sample turnaround times.

Reporting

Results are emailed or faxed at no additional charge. A hard copy of the result report is mailed within 24 hours of the faxing or emailing of your results. Cat "B" like packages are within 3-4 weeks from time of analysis. Standard Electronic Disk Deliverables (EDD) is also available at no additional charge.

Payment Terms

Payment for all purchases shall be due within 30 days from date of invoice. The client agrees to pay a finance charge of 1.5% per month on the overdue balance and cost of collection, including attorney fees, if collection proceedings are necessary. You must have a completed credit

application on file to extend credit. Purchase orders or checks information must be submitted for us to release results

Rush Turnaround Samples

Expedited turn around times is available. Please confirm rush turnaround times with Client Services before submitting samples.

Applicable Surcharges for Rush Turnaround Samples:

Same day TAT = 200%

Next business day TAT by Noon = 150%

Next business day TAT by 6:00pm = 100%

Second business day TAT by 6:00pm = 75%

Third business day TAT by 6:00pm = 50%

Fourth business day TAT by 6:00pm = 35%

Fifth business day = Standard

Statement of Confidentiality

Centek Laboratories, LLC is aware of the importance of the confidentiality of results to many of our clients. Your name and data will be held in the strictest of confidence. We will not accept business that may constitute a conflict of interest. We commonly sign Confidential Nondisclosure Agreements with clients prior to beginning work. All research, results and reports will be kept strictly confidential. Secrecy Agreements and Disclosure Statements will be signed for the client if so specified. Results will be provided only to the addressee specified on the Chain of Custody Form submitted with the samples unless law requires release. Written permission is required from the addressee to release results to any other party.

Limitation on Liability

Centek Laboratories, LLC warrants the test results to be accurate to the methodology and sample type for each sample submitted to Centek Laboratories, LLC. In no event shall Centek Laboratories, LLC be liable for direct, indirect, special, punitive, incidental, exemplary or consequential damages, or any damages whatsoever, even if Centek Laboratories, LLC has been previously advised of the possibility of such damages whether in an action under contract, negligence, or any other theory, arising out of or in connection with the use, inability to use or performance of the information, services, products and materials available from the laboratory or this site. These limitations shall apply notwithstanding any failure of essential purpose of any limited remedy. Because some jurisdictions do not allow limitations on how long an implied warranty lasts, or the exclusion or limitation of liability for consequential or incidental damages, the above limitations may not apply to you. This is a comprehensive limitation of liability that applies to all damages of any kind, including (without limitation) compensatory, direct, indirect or consequential damages, loss of data, income or profit and or loss of or damage to property and claims of third parties.

CENTEK LABORATORIES, LLC

Date: 17-Oct-19

CLIENT: Environmental Works, Inc.
Project: 2107 S, 4th St.
Lab Order: C1910044

CASE NARRATIVE

Samples were analyzed using the methods outlined in the following references:

Centek Laboratories, LLC SOP TS-80

Compendium of Methods for the Determination of Toxic Organic Compounds, Compendium Method TO-15, January 1999

All method blanks, laboratory spikes, and/or matrix spikes met quality assurance objective except as indicated in the corrective action report(s). All samples were received and analyzed within the EPA recommended holding times. Test results are not Method Blank (MB) corrected for contamination.

NYSDEC ASP samples:

Canisters should be evacuated to a reading of less than or equal to 50 millitorr prior to shipment to sampling personnel. The vacuum in the canister will be field checked prior to sampling, and must read 28" of Hg ($\pm 2"$, vacuum, absolute) before a sample can be collected. After the sample has been collected, the pressure of the canister will be read and recorded again, and must be 5" of Hg ($\pm 1"$, vacuum, absolute) for the sample to be valid. Once received at the laboratory, the canister vacuum should be confirmed to be 5" of Hg, $\pm 1"$. Please record and report the pressure/vacuum of received canisters on the sample receipt paperwork. A pressure/vacuum reading should also be taken just prior to the withdrawal of sample from the canister, and recorded on the sample preparation log sheet. All regulators are calibrated to meet these requirements before they leave the laboratory. However, due to environmental conditions and use of the equipment Centek can not guarantee that this criteria can always be achieved.

COC agrees with sample labels?	Yes <input type="checkbox"/>	No <input checked="" type="checkbox"/>	
COC completely filled out?	Yes <input type="checkbox"/>	No <input checked="" type="checkbox"/>	
Sample containers intact?	Yes <input checked="" type="checkbox"/>	No <input type="checkbox"/>	
Sufficient sample volume for indicated test?	Yes <input checked="" type="checkbox"/>	No <input type="checkbox"/>	
All samples received within holding time?	Yes <input checked="" type="checkbox"/>	No <input type="checkbox"/>	
Container/Temp Blank temperature in compliance?	Yes <input checked="" type="checkbox"/>	No <input type="checkbox"/>	
Water - VOA vials have zero headspace?	No VOA vials submitted <input checked="" type="checkbox"/>	Yes <input type="checkbox"/>	No <input type="checkbox"/>
Water - pH acceptable upon receipt?	Yes <input checked="" type="checkbox"/>	No <input type="checkbox"/>	

Adjusted?

Checked by

Any No and/or NA (not applicable) response must be detailed in the comments section below

Client contacted Yes Date contacted: 10-15-2019 Person contacted Greg Dillon

Contacted by DH Regarding: Incorrect canister number

Comments: COC canister number was incorrect. The COC reflected canister number "173", the canister number was actually "1173".

Corrective Action Changed COC canister number from "173" to "1173".
